3. Write a Python program to check a draft security policy document for required governance elements (scope, roles and responsibilities, enforcement, review cycle, approval authority) and report which are missing.

```
[5]
✓ 18s

policy = input("Enter security policy text: ").lower()

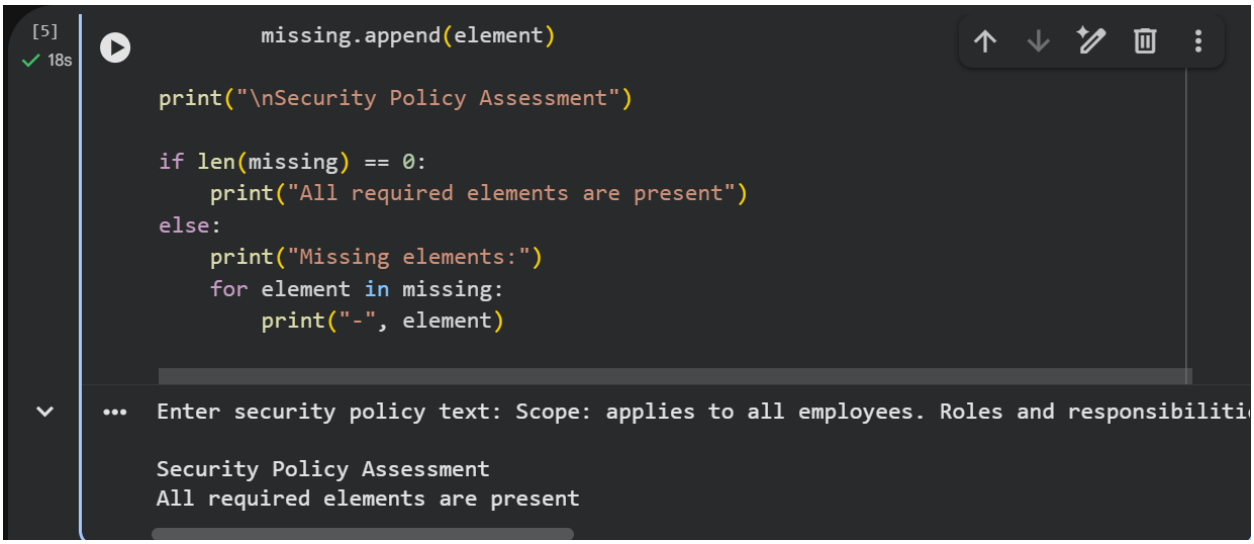

requirements = {
    "Scope": ["scope", "applies to", "covered systems"],
    "Roles and Responsibilities": ["roles", "responsibilities"],
    "Enforcement": ["enforcement", "disciplinary action", "penalties"],
    "Review Cycle": ["review cycle", "review annually", "annual review"],
    "Approval Authority": ["approval authority", "approved by", "authorized by"]
}

missing = []

for element, keywords in requirements.items():
    found = False

    for word in keywords:
        if word in policy:
            found = True
            break

    if not found:
        missing.append(element)
```

```
[5]
✓ 18s
            missing.append(element)

print("\nSecurity Policy Assessment")

if len(missing) == 0:
    print("All required elements are present")
else:
    print("Missing elements:")
    for element in missing:
        print("-", element)

••• Enter security policy text: Scope: applies to all employees. Roles and responsibiliti

Security Policy Assessment
All required elements are present
```
